

JPCS Groundscrew®

ENVIRONMENTAL
HIGHWAY MAINTENANCE

JPCS **Groundscrew**® is an innovative alternative to traditional concrete foundations for traffic signs and marker posts. The system negates the need for excavation and concreting making a valuable contribution to sustainability within the highways sector. **Groundscrew**® installations are much quicker than traditional methods, typically 20 minutes from arriving on site to leaving a completed sign in place. Traffic management requirements for schemes are significantly reduced, minimising disruption for road users and improving the safety of the public and the workforce.

Benefits

- Improved safety
- Fast and easy mounting
- No excavation
- No landfill
- Reduction in vehicle movements
- Quiet operation
- Removal and relocation possible
- Suitable for marker posts
- Accepted by the HA for use on motorways and trunk roads
